BPD and Chronic Pain study

Have you received a diagnosis of BPD along with a diagnosis of a chronic pain condition?

This is an invitation for people who:
1. Have a diagnosis of Borderline Personality Disorder, and
2. Have a current diagnosis of a chronic pain condition, and
3. Are over 18 years old

Why?
A surprisingly high number of people diagnosed with BPD also experience chronic pain. The purpose of this study is to better understand the lived experience of chronic pain for individuals with BPD. The format of this study is a single face-to-face interview with a clinical researcher.
